**June 23, 2010 --**

LONGMONT - DigitalGlobe Inc. in Longmont will provide DeLorme, an innovator of mapping and GPS technologies, with images taken from space.

The images taken by DigitalGlobe's (NYSE:DGI) constellation of satellites will be used in Maine-based DeLorme's Earthmate GPS device used by hikers, climbers and outdoors enthusiasts.

"Consumer demand for location-based services continues to grow at a rapid pace, and this growth has activated an explosion of new applications for earth-imagery solutions," said Rafay Khan, DigitalGlobe's senior vice president, commercial sales.

DigitalGlobe's imagery will be available in July, in tandem with the release of DeLorme's latest handheld GPS device, the Earthmate PN-60w. When connected to another device, the Earthmate will be capable of sending customized text messages even when the user is operating far beyond the range of cellular communications.
