VORPAL Wins AVS-56 Innovation Award

Boulder, CO – December 14, 2009 - Tech-X Corporation of Boulder, Colorado, won an AVS-56 Innovation Award, sponsored by Physics Today, for our VORPAL product. VORPAL is multi-physics simulation software for modeling the interaction of matter with electromagnetic fields. Using advanced parallel algorithms enables the investigation of highly complex physical systems with unprecedented fidelity. VORPAL enables researchers to simulate complex physical phenomena in less time and at a much lower cost than empirical testing. For more information on VORPAL, please visit <http://vorpal.txcorp.com>.

The announcement can be viewed at <http://www.avs.org/pdf/ProductAward.pdf>.

About Tech-X Corporation

Tech-X Corporation is committed to technical excellence and innovation. Our technical staff addresses specific research questions and delivers quantifiable results, culminating in specialized skills, advanced technologies, and commercial products that enable large-scale computing solutions and offer a greater understanding of physical processes. Among our core competencies is the simulation of processes, devices, and physical systems related to plasma physics, fusion, and accelerator technologies, performed on computer systems ranging from desktops to Grand Challenge class high-performance computers. By creating software for simulations and the infrastructure to support our research development, we are able to increase our understanding of complex physical phenomena. For more information, visit <http://www.txcorp.com>.
